Time : 23 Minutes

Mark Schemes

Q1.

Question Number	Acceptable Answer	Additional Guidance	Mark
	Use of $V = \pi r^2 t$ (1)	<u>Example of calculation</u> $V = \pi r^2 t = \pi \left( \frac{1.3 \times 10^{-2} \text{ m}}{2} \right)^2 \times 2 \times 10^{-3} \text{ m}$ $\therefore V = 2.65 \times 10^{-7} \text{ m}^3$ $m = \rho V = 7900 \text{ kg m}^{-3} \times 2.65 \times 10^{-7} \text{ m}^3$ $\therefore m = 2.10 \times 10^{-3} \text{ kg}$ $\frac{0.1 \text{ g}}{M} = 0.5\%$ $\therefore M = \frac{0.1 \text{ g}}{0.5/100} = 20 \text{ g}$ $\therefore \text{number of discs} = \frac{20 \text{ g}}{2.10 \text{ g}} = 9.5$	4
	Use of $\rho = \frac{m}{V}$ to find $m$ (1)		
	Use of 0.5% to find total mass needed (1)		
	Number of discs = 10 (1)		

Q2.

Question Number	Acceptable Answer	Additional Guidance	Mark
(a)(i)	<ul style="list-style-type: none"> <li>reference point so that reliable timings can be made (1)</li> <li>end of metre rule will be travelling fastest at its equilibrium position (so uncertainty is determining when rule is at this position is least) (1)</li> </ul>		(2)

<b>(a)(ii)</b>	<ul style="list-style-type: none"> <li>calculate average time period for each ruler [<math>T_1 = 0.962\text{ s}</math>, <math>T_2 = 1.072\text{ s}</math>]</li> </ul>	(1)	<u>Example of calculation:</u> $T_1 = \frac{19.3\text{s} + 19.1\text{s} + 19.3\text{s}}{60} = 0.962\text{s}$ $T_2 = \frac{21.3\text{s} + 21.5\text{s} + 21.5\text{s}}{60} = 1.07\text{s}$ $T^2 \propto \frac{ML^3}{E} \therefore \frac{E_1}{E_2} = \frac{T_2^2}{T_1^2}$ $\frac{E_2}{E_1} = \frac{T_1^2}{T_2^2} = \left(\frac{0.962\text{s}}{1.07\text{s}}\right)^2 = 0.804$	<b>(3)</b>
	<ul style="list-style-type: none"> <li>use of <math>T^2 \propto \frac{ML^3}{E}</math></li> </ul>	(1)		
	<ul style="list-style-type: none"> <li><math>\frac{E_2}{E_1} = 0.80</math></li> </ul>	(1)		

Question Number	Acceptable Answer	Additional Guidance	Mark
<b>(b)(i)</b>	$T^2$ on y-axis and $L^3$ on x-axis (or vice versa)		<b>(1)</b>
<b>(b)(ii)</b>	An explanation that makes reference to the following: <ul style="list-style-type: none"> <li><math>T^2 = \frac{KML^3}{E}</math>, so gradient will be <math>\frac{KM}{E}</math> (if <math>T^2</math> plotted against <math>L^3</math>)</li> <li><math>\therefore E = \frac{KM}{\text{gradient}}</math>, if <math>K</math> is known <math>E</math> can be determined</li> </ul>	If axes reversed in (b)(i), gradient = $E/KM$ for full credit	<b>(2)</b>

Question Number	Acceptable Answer	Additional Guidance	Mark
<b>(c)</b>	An explanation that makes reference to the following: <ul style="list-style-type: none"> <li>time a larger number of oscillations</li> <li>as the greater the total time the smaller the % uncertainty</li> </ul>		<b>(2)</b>

## Q3.

Question Number	Acceptable Answers	Additional Guidance	Mark
(a)	<p>A description that makes reference to <b>two</b> of the following:</p> <ul style="list-style-type: none"> <li>No need for further calculation <b>Or</b> gives a value for resistance without calculation (1)</li> <li>No need for an additional power supply (1)</li> <li>Uncertainties caused by two devices is (possibly) greater than that caused by one device (1)</li> </ul>	Do not accept more precise or no parallax or quicker	2
Question Number	Acceptable Answers	Additional Guidance	Mark
(b)(i)	<ul style="list-style-type: none"> <li>(As applied force increases) the length (<math>l</math>) (of wire) increases/stretches <b>Or</b> the wire is longer (1)</li> <li>the resistance increases with reference to <math>R = \frac{\rho l}{A}</math> (1)</li> </ul>	<p>Reference to formula may be in terms of proportionality or direct quote of equation</p> <p>Do not accept change in resistivity</p>	2
Question Number	Acceptable Answers	Additional Guidance	Mark
(b)(ii)	<ul style="list-style-type: none"> <li>Use of <math>GF = \frac{\Delta R}{\epsilon R}</math> (1)</li> <li>Substitution of <math>\epsilon = \frac{\Delta w}{w}</math> into GF equation (1)</li> <li><math>\Delta w = 2.5 \times 10^{-5}</math> m (1)</li> </ul>	<p>(<math>x</math> may seen in place of <math>w</math>)</p> <p><u>Example of calculation:</u></p> $GF = \frac{\Delta R}{\epsilon R}$ $2 = \frac{0.001}{\frac{\Delta w}{(5 \times 10^{-2})}}$ $\Delta w = 2.5 \times 10^{-5} \text{ m}$ <p>Accept <math>2.5 \times 10^{-3}</math> cm / <math>2.5 \times 10^{-2}</math> mm</p>	3
Question Number	Acceptable Answers	Additional Guidance	Mark
(c)	<p>An explanation that makes reference to the following:</p> <ul style="list-style-type: none"> <li>As small changes (in <math>w</math>) are multiplied many times <b>Or</b> can use a longer wire (on a small gauge) <b>Or</b> to achieve a greater change in the length (1)</li> <li>(So) greater sensitivity <b>Or</b> larger changes in <math>R</math> (for a given change in width) (1)</li> </ul>		2
